EDUCATION

Columbia University

Master of Science in Computer Science (Machine Learning pathway)

New York City, NY

August 2026 - Dec 2027 (Expected)

Haverford College

Bachelor of Sciences in Computer Science

Haverford, PA

August 2019 – May 2023

- **GPA: 3.8/4.0**

EXPERIENCE

Software Engineer

2025 – August 2026

Microsoft

- Developed full-stack web services for Microsoft's **feature flag platform** (TypeScript, React, C#/ASP.NET, Azure SQL), including a **flag rollback system** that serves **10,000+ engineers monthly**.
- Built **PowerBI dashboards** and migrated data tables to **Azure Data Explorer** to surface feature flag volume and user feedback trends, giving engineering leadership **real-time visibility** into product health.
- Built **MCP tools** and **AI Agent skills (FastAPI/Python)** for the feature flag platform's test environment, enabling **50+ developers** to retrieve/create feature rollouts from Claude/Copilot coding agents.

Software Engineer

2023 – 2025

Itron

San Francisco, CA

- Developed an interactive dashboard (**Javascript, D3.js**) to monitor the health and performance of **500M+ electric meters**, used by **100 Product Managers**.
- Built **RESTful API endpoints** for dashboard telemetry data and graph/image retrieval, handling **20K+ monthly requests**; leveraged **Redis caching** to reduce **API response latency** by **50%**.
- Built an **ETL data pipeline with Python/Bash/SQL scripts** for **500M+ electric meter** records across sharded Oracle databases, syncing daily via **CRON** to a central server for reporting and analytics.

Software Engineer Intern

2022

Citrix

Burlington, MA

- Designed **C#/ASP.NET** API to delete leftover Azure resources after Citrix virtual machine deletion, reducing **128GB** of storage per machine catalog and generating an estimated revenue of **\$48,000/year**.
- Implemented **C#/ASP.NET** API to disable Azure Virtual Machine's usage as master image for Citrix machine catalog creation, totaling **10,000+ API calls per month**.
- Collaborated with 3 software engineers on Citrix's Azure Apps & Desktop team to design **unit/integration/E2E tests** for 4 user stories.

PERSONAL PROJECTS

LeagueGuesser | [Github](#) | [Reddit Post 1](#) | [Reddit Post 2](#) | [Substack Blog](#)

- Built leagueguesser.com, a browser game that lets players **guess** which League of Legends team wins based on champion select.
- The game has had **30,000+ users** and **300,000+ plays**. The game was played by [Caedrel](#), a League of Legends streamer with **1M+ subscribers** on [his Twitch stream](#).
- **Tech Stack:** React (Javascript), FastAPI (Python), MySQL, AWS EC2

Tennis/Pickleball Reserve Bot | [Github](#)

- Developed a **Python** program to reserve tennis/pickleball courts in [San Francisco](#), scheduled to run daily through **CRON**.
- Successfully reserved **100+ pickleball/tennis courts** in a 3-month period with an average runtime of 1.5s, leveraging multithreading and direct API calls.

TECHNICAL SKILLS

Languages: Python, Java, Javascript, Typescript, C, C++, PHP, C#, Bash, HTML, CSS, R

Frameworks: React, Django, FastAPI, D3.js, Observable Plot, .NET

Misc: Git, SVN, Linux, PostgreSQL, MySQL, Jenkins, Splunk, AWS, Azure DevOps
